PDQ Launches LaserWash® AutoXpress® for Automotive Dealers

Affordable, touch-free in-bay automatic wash system from PDQ can wash up to 23 vehicles per hour

De Pere, WI (August 7, 2012) – PDQ Manufacturing, Inc., an industry-leading manufacturer of in-bay automatic vehicle wash systems, is pleased to announce the availability of its new LaserWash® AutoXpress® touch-free in-bay automatic vehicle wash system. The new LaserWash AutoXpress is an affordable wash system that has been designed specifically for automotive dealers. The LaserWash AutoXpress features advanced touch-free wash technology that delivers a quick, superior clean with the ability to wash up to 23 vehicles an hour, even the largest SUVs and trucks, including duallys.

The LaserWash AutoXpress offers a number of trend-setting features that set it apart from competitive wash systems, including PDQ's innovative Virtual Treadle which eliminates drive-on floor-mounted mechanisms, resulting in a wide-open bay that is easy for anyone to use. The AutoXpress also provides up to 1,200-psi water pressure, which enables the system to remove stubborn dirt and debris in even the most hard-to-reach areas of the vehicle without the need for brushes or cloth curtains. The AutoXpress also incorporates an advanced arch-control system that is able to rotate 360 degrees while simultaneously moving around the vehicle, which provides fast and effective cleaning for all vehicle configurations. The touch-free wash process also eliminates brush contact with vehicles, which results in minimized vehicle damage.

"We are well aware of how important a reliable vehicle wash system is to the auto-dealer market, which is why we designed the LaserWash AutoXpress with a wide range of features that enable optimized wash performance and costs in this crucial market," said Gerry Hanrahan, PDQ's Senior Vice President of Sales. "We firmly believe that the LaserWash AutoXpress will be a pivotal piece of equipment for auto dealers who are looking to streamline their vehicle-washing operations."
